APU CLUBPULSE

Never miss a campus event again

One app for every club, every event, every deadline at APU.

Team: Soeun Anisa Marshanda, Maal Mutasim Mohamed, Wasif Kabir, Yu Ya Aung

Built with Google AI Studio + Gemini
github.com/mdwasifulkabir/APU-ClubPulse

The Problem

Events are scattered across dozens of Instagram pages: @gdsc.apu, @apu.fsec, @aputoastmasters and more

Students follow some clubs but miss the rest - no single place to see everything

- Registration deadlines slip by silently - students find out after the event.

- New students don't know which clubs exist or which one fits them
- Result: low turnout, missed opportunities, clubs struggling to reach students

Our Solution

- One consolidated event timeline - every APU club event in one live feed
- One-click calendar sync - export to Google Calendar and .ics, deadlines never slip
- Quiz-based Club Matchmaker - answers: which club is for ME?
- My Saved list - bookmark the events you care about in one tap

Key Features

- *Events Feed* - live timeline of all campus events: dates, venues, free entry
- *Calendar Sync* - one-click export to Google Calendar and .ics files
- *Live Campus Radar* - see what is happening on campus right now
- *Clubs Directory* - browse every APU club in one place
- *My Saved* - bookmark events and find them instantly later
- *Club Matchmaker* - a short quiz that recommends the clubs that fit you

HOW IT WORKS

1. Open the feed - see all upcoming APU events in one scroll

2. Save an event - for example APU HackSprint 2026 or DefendAPU CTF

3. Sync - one click puts it straight into your Google Calendar

4. Show up - the reminder fires, the student attends, clubs get turnout

New to APU? Take the Matchmaker quiz and get club picks based on your interests

TECH AND BUILD

Google AI Studio and Gemini - AI-assisted rapid prototyping, idea to working app in days

TypeScript and Vite - a fast, modern web app

Git and GitHub - team collaboration with version control

Designed mobile-first, because students live on their phones

Proof: a small student team shipped a real, useful product in one hackathon

IMPACT AND NEXT STEPS

For students: zero missed events and faster club discovery

For clubs: one channel that reaches the whole campus

Next: auto-pull events straight from club Instagram pages

Next: RSVP and attendance analytics dashboards for club committees

Next: roll out to other universities – every campus has this problem
The vision: ClubPulse becomes the default home screen for campus life
